

BUTLER SURVEY SUPPLIES LTD.

Your Partner in the Field

Our Customers Speak

- about our products, and about our service...

"I was a first time GPS user and I found Leica 3D machine control very easy to use. We are able to achieve 1 to 2 cm accuracy on our John Deere grader. The service from Butler Survey Supplies is phenomenal. If they can't talk me through a problem, they come out to the job site."

Rick - Keystone Excavating

"Leica 3D machine control on our Cat grader, has increased productivity while increasing accuracies."

Shaun - Waiward Construction

"I love it! Builders request Leica machine control now to avoid over excavation. Trades that follow me know my grades are good to ± 1 cm."

Dave - Kang Construction

"Safety is one of the major benefits of this Leica 2D machine control system. I don't have to get in and out of the excavator and down into the hole, which reduces risk. The Leica system also increases accuracy and production."

Ryan - Mid-City Excavating
